

**Omineca Closes \$626,000 and Increases Previous Unit Offering to \$1,000,000**

***NOT FOR DISTRIBUTION TO UNITED STATES NEWSWIRE SERVICES OR FOR DISSEMINATION IN THE UNITED STATES.***

**Saskatoon, SK. April 28, 2020** – Omineca Mining and Metals Ltd. (TSX-V: OMM) (“Omineca” or the “Company”) announces that due to demand, it is increasing the previously announced non-brokered private placement of Units from \$500,000 to \$1,000,000 in gross proceeds (see news release April 1, 2020) under the same price and terms. Under the proposed financing, the company has closed 5,216,666 Units for gross proceeds equalling \$626,000 of the offering subject to regulatory approval.

The increased non-brokered offering will now total 8,333,333 Units priced at \$0.12 per unit for gross proceeds of \$1,000,000. Each Unit consists of one common share and one common share purchase warrant (a “Warrant”) with each Warrant entitling the holder to acquire one common share of the Company at a price of \$0.20 for a period of 24 months following the closing of the offering.

The net proceeds of the offering of the Units will be used for exploration on the hard rock claims at Wingdam and for general working capital purposes. Omineca advises that the insiders of the Company may participate in the financing, which will be completed pursuant to available related party exemptions under Multilateral Instrument 61-101 *Protection of Minority Security Holders in Special Transactions*. The offering is subject to TSX Venture Exchange approval and all securities are subject to a four-month hold period. Finders’ fees may be payable in connection with the financing, all in accordance with the policies of the TSX Venture Exchange and applicable securities laws.

Omineca is planning a hard rock exploration and drilling program at Wingdam, which represents the Company’s initial exploration program for the lode gold source of placer gold recovered from the underground paleochannel at Wingdam, BC, Canada. While not finalized, the exploration plan will begin with structural mapping and trenching, followed with diamond drilling of up to 20 exploration holes in four initial target areas for a planned 6,000 meters. This will be Omineca’s first drill program for lode gold at Wingdam.

The drill program is targeting NW striking faults where they intersect NE trending faults identified in the magnetic survey completed in 2018. This structural control pattern is indicative of Riedel style strike-slip deformation that would produce sub-vertical ore shoots similar to the

structural controls of the gold hosted at Osisko Gold Royalties' Cariboo Gold Project at Barkerville, 25 kilometers to the east.

In an earlier SkyTEM survey, a large electro-magnetic signature was identified immediately upstream of Omineca's underground placer recovery program at Wingdam. The Lightning Creek river valley is a major erosional feature cross-cutting through several parallel structures including the large SkyTEM electro-magnetic anomaly. The creek itself is known to contain high concentrations of placer gold immediately adjacent to and downstream of the electro-magnetic anomaly (see NI 43-101 report on 2012 bulk sample at Wingdam conducted by OMM's wholly owned subsidiary CVG Mining). Parallel structures with similar geology are known to host lode gold within the region. A number of placer gold nuggets recovered in 2012 were rough to jagged edged and in some cases contained quartz pieces, potentially indicative of a nearby lode source.

Exploration will commence once the snow cover has melted and drill permits have been received. This exploration program will run concurrently with the underground rehabilitation and development work on the Wingdam paleo placer project, which will also commence after the spring thaw.

### **Qualified person**

Dr. Stewart A. Jackson, PGeo, is a qualified person within the context of National Instrument 43-101 and has prepared, read and approved the technical aspects of this news release.

### **About Omineca Mining and Metals Ltd.**

Omineca Mining and Metals Ltd. controls its flagship Wingdam Project and the Fraser Canyon Project through its wholly owned subsidiary CVG Mining Ltd. The Wingdam Project is located 45 km east of Quesnel B.C. on the Barkerville highway. The property includes both placer and hard-rock tenures along the Lightning Creek valley, where topographic conditions created a thick overburden which preserved a large portion of the channel from conventional surface placer mining activity.
